Well many people now think about this and even I saw many cars which was designed for less polution. You can saw those cars in Car shows. You can also visit M&M's North India centre where you found such a car.

So I am sure it would be a perfect place to sell cars in India.

Well you know about this that many big car manufacturers now ready to start their function in India and such cars have good scope in next few years. At the moments we have good market for CNG, LPG and Ethanol based cars.
